ABOUT PUMPTRACKS

The construction of modular pumptracks is a new trend that has come to Poland relatively recently. Pumptracks, or bicycle playgrounds, are used by all age groups. Adapted for children, teenagers and adults, they have become a great alternative for active leisure. The tracks, which have a specially shaped composite surface with contoured curves, are used for cycling, scootering, rollerblading and skateboarding. Riding on a pumptrack is a great training of motor coordination and sense of balance. Pumptrack.eu is a brand of Techramps Group - a company engaged in the construction of sports facilities since 2003. For 20 years of activity we have made and designed more than 1000 skateparks, pumptracks, snowparks and wakeparks. We employ the best specialists in the design and construction industry, combining passion and experience on a daily basis.

SPECIFICATION:

Modular pumptracks have 5 years of warranty.

Anti-slip layer to guarantee traction.

The modular pumptrack can be relocated and used as an attraction at an event.

The track can be reconfigured and expanded with new modules.

The highest quality materials ensure resistance to weather conditions.

A background image of a pumptrack facility with various ramps and curves. Several people are visible riding the track, including a person on a skateboard in the foreground. The image is faded to serve as a background for the text.

MODELS

As a Pumptrack.eu brand, we offer many different models of pumptracks. Each of them has been carefully designed and manufactured to provide the best possible experience and safety for users. We offer pumptrack models for different age groups and skill levels. All our models are made of the highest quality materials, which guarantees not only the long-lasting durability of the structure, but also the safety of users. We encourage you to take a look at our offer and choose the best pumptrack model for your sports facility or community.

LINE

Pumptracks from the "Line" series, are the most basic tracks from our extensive range of modular products. They consist of several momentum pumps and entry and exit modules, allowing for a simple yet highly effective bike track for practicing riding. They are ideal for those who want to use a small space, such as on paths or alleys in a park. Thanks to their small size, they can also be used as elements of a bicycle obstacle course. Their simple design allows for quick and easy assembly and disassembly, which is especially important for temporary events or parties.

LINE1 BASIC

CONFIGURATIONS

The configurations are ideal for different types of sports facilities, such as playgrounds, fields or parks. It's an additional option, allowing you to combine two different models into a single unit to further customize the track to meet your requirements and needs, as well as to provide the best possible riding fun for users.
